# Aviator 300

## Low-cost SBB solution for Falcons

The Thrane & Thrane Aviator 300 delivers unprecedented versatility for virtually any application. With speeds up to 332 kbps, the system is a complete voice and data solution for corporate applications that comes with a range of embedded features. The core unit of Thrane & Thrane's SwiftBroadBand systems, the SwiftBroadband Unit (SBU), has an optional built-in wireless access point for easy connection of laptops, smartphones or VoIP handsets. The optional built-in router makes it easy to connect up to 6 laptops and the ISDN interface can be connected to phones, routers, PCs or secure devices. Two 2-wire interfaces enable the connection of standard or wireless handsets, fax machines, headset interface boxes, etc.

## Applicability

Falcon 50 Family  
Falcon 900 Family  
Falcon 2000 Family

## Schedule

Provisioning & studies: 8 weeks  
Duration of works: 4 weeks\*

\*Depending the aircraft configuration

## Upgrade to Aviator 300 Satcom for Aero-I/M equipped aircraft

The Aviator 300 is the natural upgrade for aircraft equipped with a fuselage mounted Aero I/M intermediate gain Satcom antenna (IGA). It introduces high speed data services via the Inmarsat SwiftBroadBand network. It also retains a built-in cabin telephone unit allowing up to six handsets. The retrofit solution has minimal impact on the aircraft wiring and structure.
